

$$\text{seconds per combination} = 5$$

$$\begin{aligned}\text{total seconds} &= \text{number of combinations OQH} \times \text{seconds per combination} \\ &= 41,472 \times 5 = 207,360\end{aligned}$$

$$\begin{aligned}\text{seconds per day} &= 60 \times 60 \times 24 \\ &= 86,400\end{aligned}$$

$$\begin{aligned}\text{total days} &= \text{total seconds} / \text{seconds per day} \\ &= 207,360 / 86,400 = 2.4\end{aligned}$$
